

## Frequently Asked Questions

### DEI Stainless Steel Locking Ties™

#### ***What can Stainless Steel Locking Ties™ be used for?***

DEI Stainless Steel Locking Ties™ were designed to secure exhaust wrap onto header piping. The uses are endless as they can withstand excessive heat while maintaining strength and durability.

#### ***How much heat can Stainless Steel Locking Ties withstand?***

The high grade 304 stainless steel construction can withstand up to 2500°F.

#### ***How strong are Stainless Steel Locking Ties™?***

A tie has a tensile strength rating in excess of 100 lbs. and that increases when multiple ties are used together in succession.

#### ***Are Stainless Steel Locking Ties™ reusable?***

Not really. Once a tie has been locked into place it maintains closure. Releasing the tension on the closure would lessen its tensile locking strength so it is not recommended for reuse.

#### ***What is the lasting durability of Stainless Steel Locking Ties™?***

DEI Stainless Steel Locking Ties™ are constructed from a high grade stainless steel that can withstand excessive temperature changes and can maintain integrity for long periods of time while retaining its high quality surface finish.
